## 2-Ply Poly Core VS. Phenolic Core

### What our covers have in common...

- ← **Made in USA (Not Imported!)** →
- ← **Extremely Solvent-Resistant - Will Not Dissolve!** →
- ← **Top quality polyester nap that will not separate!** →
- ← **They WORK - Stiff cores that last!** →

### How they are different...

Core made of 2 layers of polypropylene.	Core made from 4 layers of resin-infused paper, baked & hardened.
Nap is fused to the core.	Nap adhered with a 2-part epoxy.

### MICROFIBER YARN WET MOPS

Microfiber mops consist of the standard head band/tail band mop construction but replaces the old standard cotton or poly yarn with a microfiber yarn - a new material for the American market. Highly absorbent (up to 10 times its weight in water), excellent cleaning characteristics. Uses 1,000's of tiny 'fingers' to attract and hold water and/or dirt. Cleans most floors without chemicals. Light, launderable, highly chemical tolerant. Will last a long time. No yarn string mop will leave the floor drier. Streaking is also eliminated.

#### Advantages of micro fiber mops over existing wet mops:

- 4-5 times more absorbent
- Better particle pick up - cleans better.
- Lighter - our 16 oz micro fiber mop will pick up more water than a 24 oz cotton mop.
- Launderable - up to 200 times.
- Lint free.
- Anti-microbial construction.
- No smell - won't go sour.
- High tolerance for cleaning chemicals.
- Leaves the floor drier - means safer floors.
- No 'break-in' period.
- Quick change of mop refills.
